J Orthop Sports Phys Ther, ; Chronic low back pain: a study of the effects of manipulation under anesthesia. Segmental motion palpation and end-play tests are applied to identify those segmental movements that are increased, restricted, or painful. ChiroprResJ,;24: When performing a tissue pull usually in the direction of the thrust careful attention is paid to patient comfort. To evaluate the coronal plane posture, an open mouth projection is analyzed. The amount of force necessary to re-establish normal joint function varies with each patient.

It is also thickest in the thoracic spine and equally thin in the cervical and l... Following return of the head to the neutral position, the measurements confirmed the symmetrical dens-atlas distances. However, the adjacent posterior body lines should not demonstrate more than 3.
