In this review, we examine the development of mesenteric tissue in normality and in the setting of congenital

abnormalities. This example requires changing a gene, which is not the usual or desired approach. BoyorGirl?This paper

provides a theoretical exploration of how comparative research on the expression of emotions has traditionally focused on the

visual mode and argues that, given the neurophysiological, developmental, and behavioral evidence that links touch with

social interactions, focusing on touch can become an ideal mode to understand the communication of emotions in human and

nonhuman primates.
