Thanks Killexams. These networks generally also have a centralized time server of some kind, and you use the Network Time Protocol NTP on the router to have the router automatically synchronize itself to the time server. You need only enough to deploy your own applications and get easy support from. The router can be configured to send notifications to the NMS when unexpected events occur. The way routes are determined is similar to how you might choose to drive from your home to work. This will probably change in the future. If any unexpected events occur on the with flashing lights.
